# PureInstall PI6000 SuperSpeed USB 10Gbps Cable
Truly Any USB Function Over More Than Two Meters

With its many different connectors and specifications, USB is always a source of great confusion for end users and us professionals alike. Accordingly, there are many USB cables on the market which are a complete unknown. In addition, the maximum possible length of passive cables is only two meters at maximum bandwidth. The PI6000 USB-C cable lineup finally provides the USB „peace of mind" we've all been waiting for. It supports all the features of the largest v3.2 standard over up to five meters, more than doubling the distance of the industry standard: 10Gbps data rate, Alt-Mode for A/V signals up to 8K@60Hz, and USB Power Delivery with up to 100/60W of power. In addition, it is fully backwards compatible with USB v2.0 and never requires an additional power supply.

USB-C and v3.2 Compatible

Supports all features of USB-C and USB v3.2. 10Gbps data rate, Alt-Mode for A/V signals up to 8K@60Hz, USB Power Delivery with up to 60W. Fully backwards compatible with USB v2.0.

More Than Double the Range

The industry standard for full USB v3.2 transmission is a maximum of just two meters. PI6000 cables are available up to five metres cable length, without any compromise.

No more „either ... or"

Unlike other active cable technologies, there's no need to sacrifice either the DP Alt-Mode for AV transmission or the USB data channel.

Made for Installations

All components, such as signal amplifier, reclocker and E-Marker chipset are integrated into the connectors. No clunky box halfway down the cable that doesn't fit through a cable duct.

Integrated E-Marker

The „E-Marker" chipset integrated in the connector negotiates the maximum possible data formats with both connected devices.

Plug&Play

The cable works according to the Plug&Play principle - connect and enjoy! No additional power supply required. True plug & play for true USB „peace of mind".
